## 13/16 <u>Do you know in the HCx panels of Iddero you can configure up to 4 touch gestures?</u>

Really useful to activate scenes with a single gesture, for example, turn on the lights of the entrance hall when you get home.

You can enable it in the configuration software iddero-config, Project / General / User Interface / Enable touch gestures. Four communication objects will be generated, with the gestures swipe up, down, left and right.
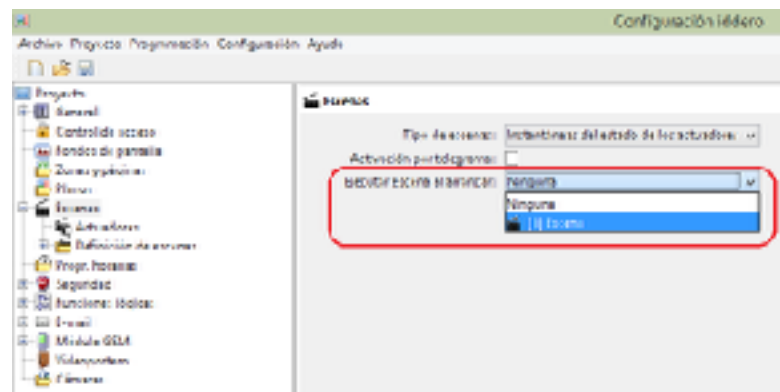

If you want to know more about Iddero, check the **online catalog**.

14/16 <u>Do you want to run a scene when you start up your HCx o HOME SERVER?</u>

If you want to enable a scene when the panels HCx or Iddero Homer Server start up, you can easily do it in *Scenes / Execute scene on startup*. You will be able to choose from scenes defined in the project. Know more about Iddero, check the **online catalog**.

15/16 idderocloud – FOR HCx SCREENS AND HOME SERVER FROM IDDERO

If you do not know the idderocloud service for remote access on HCx screens and Home Server from Iddero, you are lucky, because we are going to explain you what it is and how to use it.

idderocloud allows you to access to the HCx screens and Home Server remotely, and in this way to control and monitor your home anytime and anywhere. All this without the need to pay for a static IP

address, configure DynDNS services, modify your router configuration, install any additional device, software or special plugin. In addition, this service is completely free.
