## Glass Push Button II Lite, 1-/2-fold

**In the variations Neutral,  
I/O symbol and/or Up/Down symbol,  
and with temperature sensor**

Innovative group control, the new multi-tip function, the patch function, RGBW status LEDs and the integrated temperature sensor. With these new functions / features, the Glass Push Button II Light presents itself on the market and fits seamlessly into the existing MDT glass assortment.

With the innovative group control, you move the blinds individually in the room using the normal up/down and stop function. In addition, all blinds in the room, for example, can now be moved as a group by pressing a button for an extra-long time. A separate group push-button in the room is not required.

With the new multi-tip function, up to 4 functions can be assigned to one key. The data type and the corresponding values are defined in advance in the application for the function. By pressing the button, dependent on the number of contacts the corresponding function will be enabled. Thus, for example, different lighting groups can be switched with one push-button.

The extensive application enables functions such as switch/dim lighting, blinds, values and scene control. The buttons can be freely set as a pair of buttons or as individual buttons. The patch function is also integrated and enables fast switching of an additional channel. Status indicators are RGBW LEDs. In addition to the colours red/green/blue, an additional white LED is also installed and ensures a clear white in the status display. The brightness of the LEDs can be adjusted in 5 steps via a day/night object.

The Glass Push Button II Light is available as single and double push-button in the colours white and black. There are different versions for the respective glass pushbutton, neutral without inscription or inscribed versions with I/O symbol and/or Up/Down symbol. Versions with integrated temperature sensor are also available. The Glass Push Button II Light can be excellently combined with the Glass Push Button II Smart or the Glass Central Operation Unit Smart.
