

The 16/20 A Switching actuators SA/S x.16.5.1 are modular installation devices in ProM Design for installation in the distribution board.

The devices are particularly suitable for switching loads with high peak inrush currents such as fluorescent lighting with compensation capacitors or fluorescent lamp loads (AX) to EN 60669.

Manual actuation of the Switch Actuator is possible using a button. This simultaneously indicates the switching state.

The Switch Actuators can switch up to 12 independent electrical loads via floating contacts. The maximum load current per output is 20 A.

The connection of the outputs is implemented using universal head screw terminals. Each output is controlled separately via the KNX.

The devices do not require an additional power supply and are ready for immediate use, after the bus voltage has been applied.

The Switch Actuators are parameterised via ETS. The connection to the KNX is implemented using the bus connection terminal on the front.

¹⁾ Further information concerning electrical endurance to IEC 60 947-4-1 can be found at: AC1-, AC3-, AX-, C-Load specifications.

²⁾ The maximum peak inrush current may not be exceeded.

³⁾ The specifications apply only after the bus voltage has been applied to the device for at least 30 seconds. Typical response delay of the relay is approx. 20 ms.

* ... = current version number of the application program

Note

For a detailed description of the application program see „Switch Actuators SA/S“ product manual. It is available free-of-charge at www.ABB.de/KNX.

The ETS and the current version of the device application program are required for programming.

The current version of the application program is available for download on the Internet at www.abb.com/knx. After import it is available in the ETS under *ABB/Output/Binary output xf 16C/...** ($x = 2, 4, 8$ or 12).

The device does not support the closing function of a KNX device in the ETS. If you inhibit access to all devices of the project with a BCU code, it has no effect on this device. Data can still be read and programmed.
