

MPCOID21X

MODULE PORT CONVERTER

for the use of a second input module at the D21x series

Designed,
developed and
made in Germany

The standard version of the D21x series of DoorBird IP Video Door Stations offers two ports: one for the connection of input modules (red), e.g. keypad or multi-user modules, and the other one for the connection of output modules (green), e.g. display or info modules.

The Module Port Converter offers the possibility to convert the port for output modules (green) into another port for input modules (red), e.g. to operate a keypad and a multi-user module simultaneously.

When using the Module Port Converter, it is not possible to use output modules on the port.

The Module Port Converter can be used for the following combinations.

Combination A:

Port (red): Keypad module with 12 keys

Port (green) with Module Port Converter: MTM14A or MTM18A

Combination B:

Port (red): MTM14A or MTM18A

Port (green) with Module Port Converter: Keypad module with 12 keys

GENERAL
