Information, data and values of these documents can be changed without prior warning. Technical information can also be changed without notice.

iTunes, App Store, iPhone, iPod and iPad are commercial brands of Apple Inc.

Houseinhand is a commercial brand of Intesis Software S.L.

Important Considerations

The configuration file and the license file are completely independent files. The license file is only related to the UDID number and license number, not to the configuration file.

Introduction

iTunes File Sharing

If you have never used your iPad, iPhone or iPod before, first of all you must download and install iTunes and configure the device according to the instructions that will appear in your screen. Once linked the iPad/iPhone/iPod with your iTunes Store account, it is time of installing the application. Download houseinhand® from App Store for free.

Now, the application will execute in demonstration mode. You can see a sample of the interface and navigate through the menus, but not controlling your house.

So that houseinhand® allows you to control your house, you must transfer two files:

- xxxxxx.**cfg**: This file contains the necessary configuration information for the application to recognize your house.
- zzzzzzz.**hnh**: This file is the license.

The configuration file can be shared by several people as long as they want to control the same house, with the same room and device structure.

In the case that not all of the family/company members need to be able to control the same rooms of the house/office, it will be necessary to create a configuration file for each one of them.

The license file is referenced to the UDID (unique identifier number of each device) in a way that it will not be able to be shared. The license file only works for the device it was created for.

In order to transfer the files to your device, the File Sharing method will be used.

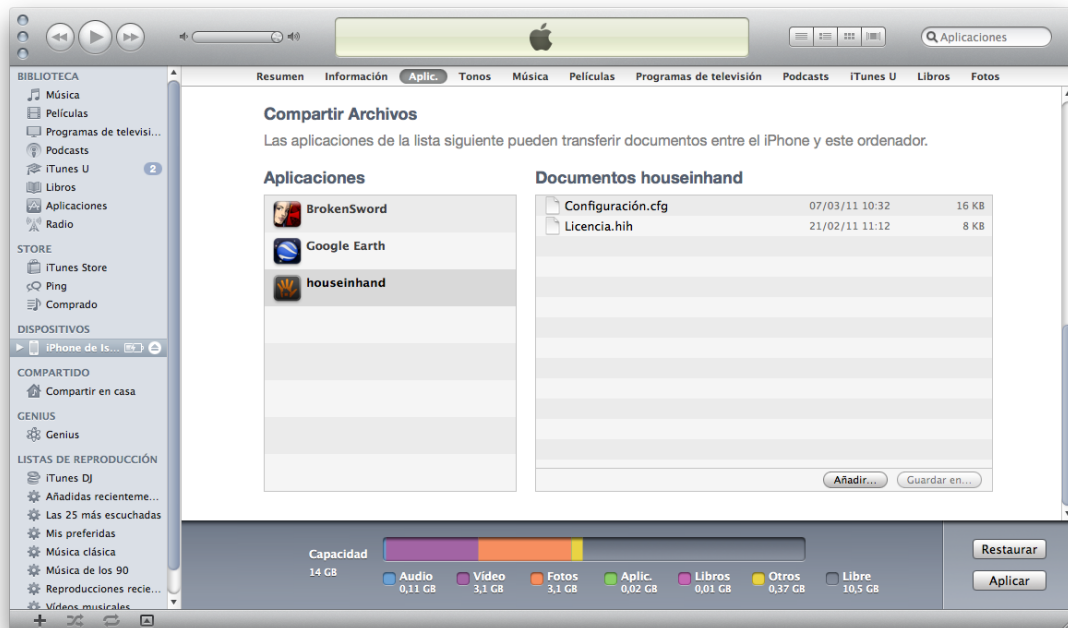

- 1 Open iTunes.
- 2 Select the device you want to configure in the left side bar.

- 3 Select the Applications tab.

- 4 Get help from the scrolling bar in order to navigate towards the lower part of the window until you find 'File Sharing' and click in houseinhand®.

- 5 Click in the button 'add' and select the files.

That is all. Next time you start houseinhand® in your device, the application will recognize your house and it will be ready to control it (see multitask section).

Multitask

The application supports multitask in iOS 4 or superior. This will allow that when you exit the application and start it again, it will be just right where you left it.

However, whenever you make a change in the configuration files you will have to close the application completely so that they have effect.

To close the application completely:

- Press twice the Home button (physical button in the lower part of your device).

- Once the multitask bar is opened, keep the finger on any of the icons until they start to tremble.

- Press on the red button that appears in the houseinhand® icon and the application will close completely.

Obtaining a license

The license file is necessary to associate a device (iPhone/iPod/iPad) with the license number obtained. This file is totally independent from that of the configuration, and it is only necessary to request one for every new device.

The steps to follow must be carried out from the final device, that is to say the device for which one requests the license. Though the captures that appear later are that of the iPhone, the procedure in case of being an iPad is the same.

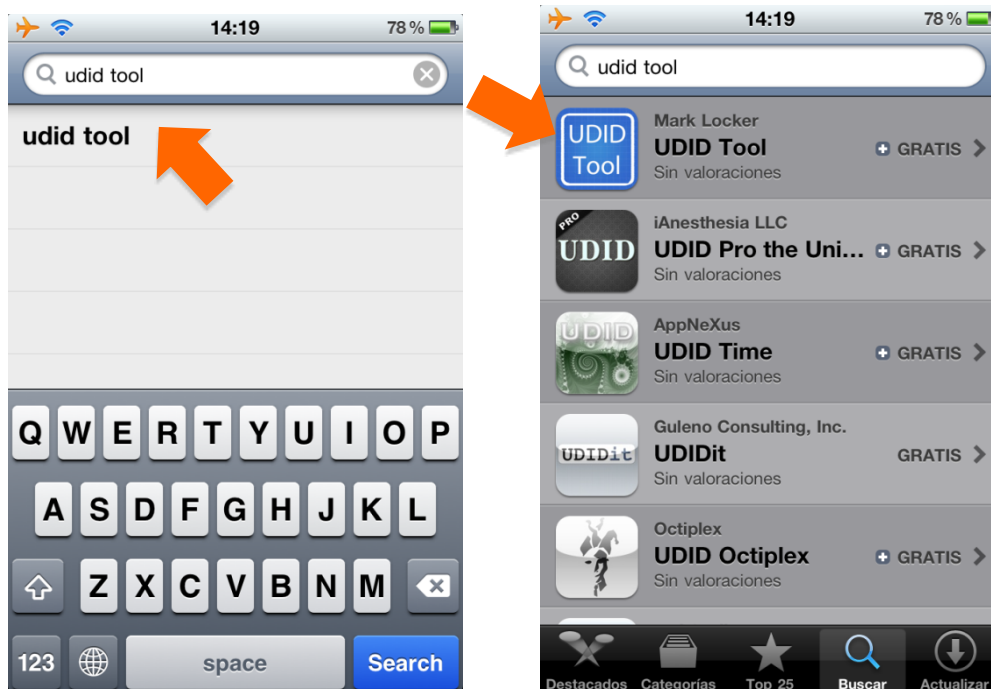

1. From the start window, Access the “App Store” application.

2. Once the application is launched, select the option: “*Search*”. Next, type “**UIDID Tool**”.

3. Access the application “**UIDID Tool**”.

- Click in the blue box “Free”. Next, click again in the box, now in green, “Download”.

- Introduce the password so that the application is downloaded in your device.

6. Access the application and press “Send Email”.

7. Automatically, it will generate an e-mail with the device's UDID.

This e-mail must be sent to your wholesaler, indicating the reference of the order in the concept and the type of license to assign to each device.

The references for each license are the following:

LICENSE TYPE / DEVICE	REFERENCE
iPhone limited to 20 devices	HIH_IPHONE_20
iPhone unlimited	HIH_IPHONE
iPad limited to 20 devices	HIH_IPAD_20
iPad unlimited	HIH_IPAD

For instance, in case of requesting two licenses, a limited one for iPhone/iPod and an unlimited one for iPad, you must indicate it as follows:

1. iPhone/iPod's UDID – HIH_IPHONE_20
2. iPad's UDID – HIH_IPAD
