

This document describes how to link the Intesis AC Cloud Control device (hereafter referred to as "AC Cloud Control") to the Wi-Fi network without being logged in, via Bluetooth using the Automatic mode. For other configuration modes, please refer to the [Device Configuration with Bluetooth](#) manual.

This configuration guide applies to the AC Cloud Control with the order code INWFIGXX001I1XX. If you have a Brand Specific AC and the order code is different, please refer to the [Quick Wi-Fi Configuration](#) guide.

## Note:

- To link the AC Cloud Control to the Wi-Fi, configure your Access point in the 2.4GHz band and the 802.11 b/g or /n mode.
- The AC Cloud Control generates its own network named INTESIS\_XXXXXX, being XXXXXX the last 6 digits of the AC Cloud Control MAC address.
- Memorize the name and password of the Wi-Fi network to which you want to link the AC Cloud Control.

## What is needed:

## Before starting the linking process with the App:

1. Install the AC Cloud Control following the corresponding [Installation manual](#).
2. Keep your Smart device close to both the Access point and the AC Cloud Control.
3. Turn on the Bluetooth of your Smart device.

## Once you completed the previous steps, open the AC Cloud Control App and proceed as follows:
