

# ISE SMART CONNECT KNX PROGRAMMABLE

New devices for the KNX world

ise Individuelle Software-Entwicklung GmbH

## The ise smart connect KNX Programmable

KNX becomes fully compatible.  
Simply integrate new devices yourself.  
One adapter for all systems.

Using ise smart connect KNX Programmable, third party devices can be easily and reliably integrated into the KNX system. The KNX interface provides ETS group objects which can be configured individually with the required bit size and data point types. For the connection to the third party system, the IP- as well as the USB-interface can be used.

The Programmable is the first affordable alternative to an expensive KNX device development. But not only the low price is an argument – also extending the application in future is pretty simple. The application is implemented in C#. This allows you to use widespread and even free-of-cost development tools. And the best thing is: The device is already certified by KNX association. The App can be used and configured within ETS without any further certifications.

### Features:

- ::: programming the application in C# and VB.Net
- ::: up to 64 KNX communication objects
- ::: IP- and USB interface to connect to third party devices
- ::: Includes KNX certification

## The world has opened up: KNX for everyone!

Beamer. Sound systems.TV. Cloud data.  
All via KNX

**From electric meter to heater:** The Programmable brings together KNX and devices that were not compatible previously, and the development of individual integration logic only takes a few days.

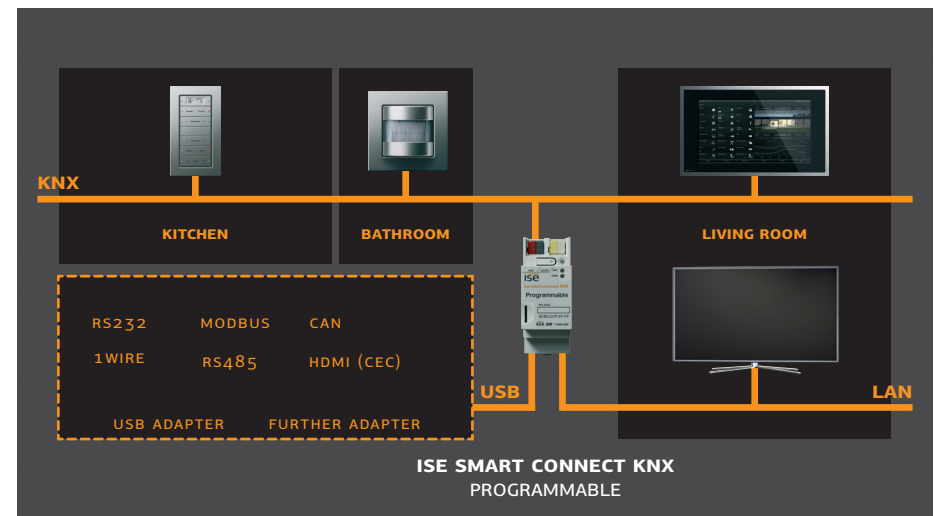

### Use cases

#### ::: Relaxing at your fingertip:

Just push one button and the light is dimmed and the multi media system is started. With the Programmable, devices you would not have dreamed of so far can now be integrated into the KNX system.

#### ::: Integrate third party systems:

Use IP or USB adapters (FTDI) – e.g. Modbus, 1Wire, RS232, RS485, HDMI (CEC), IR, CAN and even more – to integrate third party systems easily into the world of KNX.

# Smart Connection

## Inexpensive entry into the world of KNX

There has never been a lower threshold into the world of building automation. The ise smart connect KNX series' Programmable only cost a fraction of device development, and certification is already included! Contact us now and we are happy to give you all the details.
