

KNX IP-Switches

FacilityWeb

Lingg & Janke's FacilityWeb technology is characterized by its integrated KNX communication via HTTP and FTP. With this type of communication, each KNX bus device has its own homepage identified by its specific physical address and the IP address of the network coupler having the role of a link. KNX IP switches act as virtual switches through a web browser, Vista Sidebar or mobile devices. All pushbutton and switch functions can be activated via the IP network. This principle allows easy-to-implement visualization of feedback switching states.

The range of KNX IP switches presented by Lingg & Janke comprises a main module and an extension module, each offering 4 pushbutton switches. Each module can be configured to provide rocker switch actions or single-key pushbutton actions. The extension modules are connected by means of prefabricated ribbon cables of different lengths of up to 50 cm.

Up to three extension modules open out the functional range of the KNX IP switch main module. As many as 16 switching functions can thus be implemented without great expense, using just one bus coupling unit.

The switching rockers are available in the color arctic-white and with laser-engraved labeling. All KNX IP switching modules are offered with a single or double rocker unit. Lingg & Janke KNX IP switches are compatible with the Kopp Design HK05 switch range and can thus be freely combined with these devices.

In the ETS application software, you always go through the same steps when setting the module parameters, be it the main module or the extension module. For every module you decide whether the switch function is to be implemented by a rocker switch action or a single-key pushbutton action. The switch action itself can be an ON/OFF or dimmer operation, louvre blinds or scenario control, or a value setting function.

push button modules

main modul

- 4 button main modul with integrated bus coupling unit for connecting up to 3 extension modules
- with Facility Web functionality (in connection with NK-FW via Webbrowser)

extension modul

- 4 button extension modul without bus coupling unit
- including connecting cable
 - 20cm --> 2-gang switch box
 - 27cm --> 3-gang switch box
 - 35cm --> 4-gang switch box
 - 50cm --> for opposite wall mounting

- replacement connecting cables

rocker units

- All modules can accommodate single or double rocker units.
- All modules may have rocker switch action or single-key pushbutton action.
- All rocker units are available in the color arctic-white with or without laser-engraved labeling.

- KNX IP-Switches are compatible with KOPP Design HK05
