KNX push-button modules

The new generation

More variety across the ranges, simple operation

The push-button modules with integrated bus coupling unit are already well-known from the Flat Design range. This flexible technology has now also been transferred to further switch ranges: they are available in AS 500, A 500, A plus, A creation, CD 500 and CD plus as 1- to 4-gang in standard or universal versions. The operation is carried out via the large push-buttons which are available in a neutral format or with symbols. Thanks to this new versatility across the ranges, the KNX push-button modules can be optimally integrated in existing electrical installations.

AS 500 in white, also available in ivory

A 500 in laquered aluminium, also available in white

A plus in chrome (aluminium cover), 4 further frame colours available

A creation in soft-white (aluminium cover), glass frame in 4 further colours, duroplastic frame in 3 colours

CD 500 in white, also available in ivory, light grey, grey and black

CD plus in white with application elements in granite, two further colours available for frames and 12 further colours for application elements

Simple installation thanks to integrated bus coupling unit

To enable a simple installation, the new generation of KNX push-button modules is already fitted with a bus coupling unit. The push-button extension module makes e.g. a 4-gang push-button module universal into an 8-gang unit both quickly, simply and cost-effectively. The associated push-button covers are conveniently supplied as complete sets in 1- to 4-gang and are available as a neutral version or with arrow symbols.
